

Vikas Chaurasia

Data Analyst

Mumbai, India | vikasjchaurasia@gmail.com | +91 9987056798 | [in/vikasds007](https://in.vikasds007) | [VikasDs007](https://github.com/VikasDs007)

Professional Summary

Detail-oriented Data Analyst bridging the gap between business strategy and technical execution, holding an M.Sc. in Data Science and a B.Com in Finance. Highly proficient in **Advanced SQL, Python, and BI tools (Power BI, Tableau)** for building scalable data pipelines, executing statistical analysis, and developing interactive executive dashboards. Experienced in **AI-powered analytics** - deploying end-to-end ML pipelines as live applications using Streamlit and Scikit-learn. Adept at deep-dive root-cause analysis, data wrangling, and stakeholder management - ensuring high Data Quality (DQ) for time-sensitive corporate reporting. Strong communicator with a proven ability to translate complex datasets into actionable business intelligence and collaborate seamlessly with cross-functional teams.

Technical Skills

Programming	&	SQL (Joins, Window Functions, CTEs, Query Optimization), Python (Pandas, NumPy, Scikit-learn)
Databases		
AI & ML		Machine Learning Pipelines, Gradient Boosting, Random Forest, SVR, Regression Analysis, Streamlit
BI & Visualization		Power BI, Tableau, Advanced Excel (Pivot Tables, VLOOKUP), Dashboard Reporting, KPI Monitoring
Data Management		ETL Pipelines, Data Wrangling, Data Cleansing, Root Cause Analysis, Quality Assurance (QA), JIRA
Analytics Techniques		Exploratory Data Analysis (EDA), A/B Testing, Statistical Analysis, Process Automation
Soft Skills		Stakeholder Management, Cross-functional Collaboration, Data Storytelling, Business Communication

Experience

Data Operations Analyst

April 2022 - June 2023

BluBrick Realty

Mumbai, India

- Designed and optimized data extraction workflows using **Advanced SQL and Python**, successfully cleaning and transforming large-scale operational datasets for enterprise-level reporting.
- Investigated and resolved reporting discrepancies by executing deep-dive **root-cause analysis** on upstream data, ensuring complete accuracy and high data integrity for financial and operational metrics.
- Developed automated **business intelligence** workflows and interactive **Power BI dashboards**, translating raw data into actionable insights that improved **dashboard reporting** efficiency by **30%**.
- Collaborated with **cross-functional teams** to gather business requirements, document analytical processes, and effectively communicate complex data insights to non-technical **stakeholders**.

Projects

AI Medical Insurance Cost Predictor

[GitHub](#) [Live App](#)

Python (Scikit-learn, Streamlit) · Machine Learning Pipeline · Predictive Analytics · Live Deployment

- Architected an end-to-end ML pipeline evaluating **4 models** (Gradient Boosting, Random Forest, SVR, Linear Regression) - best model achieved **$R^2 = 0.884$** on held-out test data.
- Deployed the best-performing model as a **live Streamlit web application**, providing real-time predictions and quantified cost-reduction recommendations based on demographic profiling.
- Identified smoking status as the dominant cost driver (**67% feature importance**), translating model output into actionable **business intelligence** for non-technical stakeholders.

Campaign Performance ETL Pipeline

[View on GitHub](#)

Advanced SQL (MySQL) · ETL Frameworks · Power BI · Data Wrangling · Marketing Analytics

- Designed an end-to-end ETL pipeline using SQL to clean, parse, and aggregate **55,000+ rows** of unstructured marketing performance data, establishing a highly reliable reporting and intelligence layer.
- Implemented rigorous **data wrangling** and validation checks to standardize inputs, mitigating upstream data issues and eliminating anomalies before final dashboard integration.
- Built interactive **Power BI dashboards** tracking funnel conversion metrics, CAC, and ROI - enabling reusable **dashboard reporting** logic for stakeholder decision-making.

E-Commerce Sales Analysis Dashboard

[View on GitHub](#)

Python (Pandas, Matplotlib) · Advanced Excel · Business Intelligence · Variance Analysis

- Engineered a Python-driven data workflow to preprocess and clean **3 years of transactional data** (2023-2025), extracting key revenue drivers, regional performance metrics, and seasonal operational trends.
- Built robust management dashboards to visualize cross-functional sales performance, presenting **data-driven narratives** that translated complexity into clear, actionable retail strategies for stakeholders.

Education

M.Sc. in Data Science & Business Analytics — HSNC University, Mumbai

2025

Bachelor of Commerce (B.Com) - Finance — Rizvi College of Arts, Science & Commerce, Mumbai

2021

Certifications & Awards

- 3rd Place** - AI Prompt Engineering Workshop (Sci-CodE #24) · Demonstrating emerging AI capabilities
- Certification** - The Ultimate Job Ready Data Science Course (CodeWithHarry)
